Art Unit: 1724

Claims 14 and 19-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 6,284,132.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of this application are deemed to be obvious variants of the claims in U.S. Patent No. 6,284,132.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1724

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13 and 15-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Gauer et al. (U.S. Patent No. 4,722,797). The reference discloses a water softener comprising a resin tank (16), a brine tank (26), and a piping system for transferring brine from the brine tank to the resin tank in order to regenerate a resin bed in this resin tank. This reference further includes salt selection means (see col. 1, lines 22-23), and water quantity/dispensing means for adding a variable quantity of water to the brine tank (see col. 8, lines 20-22); and this is all that is required by apparatus claims 13 and 15-18. Applicant should note that the intended use of a device (i.e. varying the quantity of water added to the brine tank based upon the type, instead of the amount, of salt selected) is not a structural limitation, and hence cannot be relied upon to patentably distinguish the above noted apparatus claims. It is well settled that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

Johnson (U.S. Patent No. 5,232,953) and Janke et al. (U.S. Patent No. 5,234,601) disclose similar water softening systems having means for selecting different types of salts for producing a regenerant solution (see col. 3, lines 3-5 of Johnson; and col. 1, line 41 of Janke et al.). Rak (U.S. Patent No. 4,970,003) shows a water softener in combination with a temperature sensor. Tsuchikawa et al. (U.S. Patent No. 5,624,535) discloses positioning a temperature sensor within a brine tank (see Fig. 1; and col. 3, lines 26-28).
